## **SERVICES WE OFFER:**

- ❖ Business website designing and development.
- ❖ Micro websites and Personal websites.
- ❖ Digital Marketing, SEO services and SEM services.
- ❖ Google Ad words.
- ❖ Customized software solutions.
- ❖ Customized mobile app solutions.

## **BUSINESS WEBSITE DESIGNING AND DEVELOPMENT**

Websites have become one of the basic means in the business market. Some of the businesses have a compulsion to have a website for their business. But the pricing in the market is way beyond the limit point due to lack of technical knowledge to the customers. Our main goal is to be able to provide a website to every single user who owns a business or has an idea of starting own business.

INR 4999

**Note:** The above charges are only for responsive and static websites.

Ecommerce and word press websites charge will differ.

## **Guidelines on Website designing and development:**

- ❖ Websites created by Entech are templates based on HTML, CSS and Word Press.
- ❖ Websites will be given in 3-9 days of time after the final approval from the PRS document.
- ❖ Depending upon the requirements, almost all our websites are friendly on mobile phones, desktops, laptops and tablets.
- ❖ Additional pages cost Rs. 500/- per page.
- ❖ Additional Email account cost Rs. 250/-
- ❖ E-mail creation takes up to 24 – 48 hours to get active.
- ❖ Changes in website should be through Email or whatsapp and our support team will contact you within 24 hours. The changes will be done within 24-48 hours of time.
- ❖ Websites Domain will be taken from GoDaddy.com LLC.
- ❖ We do not provide separate admin panels to the websites. If you require admin panel, then additional charges may apply.

Note: Clients do not have much technical knowledge, so other companies do not take guarantee for their client's mistakes. That is why we give you one year maintenance and you can renew it later.

## HOW TO IDENTIFY THE PROGRAMMING LANGUAGE OF A WEBSITE?

The programming language of the website can be identified by checking the file extensions in the URL.

For example:

- ❖ If a URL ends with /index.html, /home.html, /some-name.html the language written is HTML language.

- ❖ If a URL ends with /index.php, /home.php, /some-name.php the language written is in PHP language.

*next generation IT*

- ❖ If a URL ends with /about, /home, /some-name then it is Word press website.

## **WHY TEMPLATE BASED HTML & CSS WEBSITES ARE BETTER THAN WEBSITES CREATED ON PHP AND WORDPRESS?**

### **(IF STILL CLIENT REQUIRES WORDPRESS WEBSITE THEN WE CAN PROVIDE)**

#### **❖ Total control over your SEO:**

Nothing in the programming world exists like HTML for controlling elements.

We can customize HTML websites easily with little knowledge of the code. With Word press we have to have full knowledge of the theme and its settings. For example, in word press one will have to be at the mercy of developer to change factors like reducing http requests or will have to do it by him/ her, which most probably will end in a crash for less experienced people. And the work involved will be restyling the entire styling components, which is a time consuming job which we don't recommend to our clients.

#### **❖ Build Adaptive Websites:**

If you choose word press it is quite difficult to spot an adaptive theme. The chances are that it will not adapt to mobile screen and there will be issue of "Size target tap" for user experience. SEO needs mobile friendliness for search engines.

#### **❖ HTML and CSS can be easily tracked by SEO for marketing the product and getting the result on first page of search engine of Google.**

In word press if you use plug-in and dynamic components, it might not be a suitable option for SEO to get the website on first page of Google.

#### **❖ In HTML, there is no tension of updated versions. Word press constantly updates versions, which require updated plug-in also. If the plug-in are not compatible, you are forced to find an alternative plug-in. changing the appearance may result in performance issues and problems for SEO.**

- ❖ HTML is faster in its operations. For most basic websites with less dynamic contents, HTML will usually perform faster operations than Word press. In SEO, the time of loading websites matter the most.
- ❖ Word press themes usually have junk problems. The amount of non-utilized codes will eventually slow down the entire website. If the code is redundant in nature, even using cache plug-in is of no use.
- ❖ Even a slight error in word press coding can shut down entire website while with HTML it doesn't happen.
- ❖ HTML websites will offer more security than Word press. Any Vulnerability reported is common to Word press websites. Hacked websites lose ranking in Google.

## GOOGLE ADWORDS

AdWords (Google AdWords) is an advertising service by Google for businesses wanting to display ads on Google and its advertising network. The AdWords program enables businesses to set a budget for advertising and only pay when people click the ads.

The Ad Services is largely focused on keywords.

Businesses that use AdWords can create relevant ads using keywords that people who search the web using the Google search engine would use. The keyword, when searched for triggers your ad to be shown.

AdWords at the top ads that appear under the heading “Sponsored Links” found on the right-hand side or above Google search results. If your AdWords ad is clicked on, Google search users are then directed to your website.

When using AdWords keywords are also used to determine your cost of advertising. Each keyword you choose will have a cost per click (CPC) bid amount. The bids specify the maximum amount you’re willing to pay each time someone clicks your ad (at the maximum cost-per-click). A higher CPC bid can allow your ad to show at a higher position on the page.

## Guidelines on Google AdWords:

- ❖ Decide the keywords required for your Business

Keywords

web design website design web designer webdesign web developer

ecommerce website web development company web development

best website design web design company website designer web page design

web agency website creator ecommerce website design

- ❖ Write your ad and be precise

Text ad

Landing page

The landing page is the URL you want people to reach after clicking your ad. It should match what your ad promotes.
